The **P&L SPECIALTIES 1/2 TON BIN DUMPER** features all stainless steel construction, a robust hydraulic system, and rugged electrical controls. It is designed exclusively to meet the unique processing requirements of wineries.

The versatile design allows the bins of fruit to be loaded into the rear or either sides of the **BIN DUMPER**. The dumping cycle is controlled by foot-actuated controls on a 25' tether. This allows the operator to evenly control the dump cycle and modulate the exact amount of fruit being dumped. Your forklift operator can then concentrate on loading and unloading bins, instead of being tied up dumping fruit.

1/2 TON BIN DUMPER

When used with a sorting table, the uniform control of the dumping cycle remarkably improves sorting ability, provides a more uniform delivery to the destemmer. This improved consistency makes all the difference.
