Contractor's Licenses: CA - 803431 OR - 180330 WA - PLSPELS923BZ

The **P&L SPECIALTIES LT™ (Le Trieur)** is a key component of "THE SYSTEM" - **P&L SPECIALTIES** best selling M.O.G. (Material Other than Grape) removal sorting system. The **LT™** MOG Separator is located underneath or downstream from the destemmer. This machine's innovative design allows unripe "shot" berries, stem jacks, raisins and other MOG to pass through a removable wedge-wire screen. The **LT™** comes with two different sized wedge-wire screens to allow fine tuning of MOG removal.

The **LT™** MOG Separator's gentle shaking motion then allows the whole, ripe berries to easily pass onward. This technology dramatically reduces the labor required for post-destemmer sorting. Think of it as an extra set of hands, a lot of hands, removing the pieces before final inspection on a post destemmer sorting table. "The **LT™** means a giant leap forward in the quality of must going to your fermenters!"

Manufactured entirely of stainless steel, equipped with a VFD for complete range of speed control, and a 25' tethered pendant for convenient control. The **LT™** MOG Separator is very easy to operate, clean and allows juice to be captured. The **LT™** MOG Separator can be designed to fit into your existing line or, of course, will integrate easily into a new **P&L SPECIALTIES** processing line.

**U.S. Patent #7,581,646.** It is the **ONLY** patent on MOG separation equipment!

LT™ (LE TRIEUR™)
